

About Community Health Partners

Building a healthier community one member at a time

Community Health Partners is a Physician Hospital Organization (PHO) that serves customers in Collier and southern Lee counties. We are a local comprehensive Provider Network comprised of over 700 Board Certified Multi-Specialty Physicians, Local Hospital Systems and Ancillary Healthcare Providers/Facilities. Community Health Partners represents the network as a whole, and contracts with local employer groups, insurance companies and other networks, enabling employees and their beneficiaries' access to medical services while reducing out-of-pocket expenses.

In addition to its network contracting functions, Community Health Partners also functions as a Utilization Management company offering you a medical services solution with benefits for your employees. Local registered nurses and case managers review care and services for medical necessity. They also assist members with locating physicians and facilities within their network, which reduces cost to members and employers using pre-certification screening.

Smart Choice is a personalized program that focuses on education, prevention, behavior modification, and self-management to minimize common health risks: Heart Disease, High Blood Pressure, High Cholesterol, Diabetes, Weight Management and Asthma. A registered nurse and licensed dietitian meet one on one and educate enrolled members on improving lifestyle through coaching to grasp confusing food labels, meal planning, and including a guided grocery shopping trip!

WorkCare's Mission is to improve the quality of care and reduce workers compensation cost and liability. WorkCare manages utilization to promote the best level of health care within appropriate time frames. Our medical case managers communicate with local providers and have built a relationship over the years to efficiently coordinate and monitor medical services for employer's injured workers. Case managers promote early return to work, provides education, provides timely information, and monitors treatment guidelines to return employees to productivity.
